

TELECONFERENCING AND ITS USE IN THE EDUCATIONAL PROCESS

Sharofutdinova Mahlyo Nishonboy qizi
Rishton District Vocational School No. 1
Informatics Science Teacher

ANNOTATION

In this qualification work, Teleconferences and their use in the educational process are explained. Also, the content and essence of the innovative and technological approach to the teaching of computer science, the scientific-theoretical basis of increasing the effectiveness of education based on the use of interactive methods in the educational process, the importance of using teleconferencing in the educational process, the content and essence of organizing teleconferences shown.

Today, distance education is well-established in the United States, dating back to the late 1970s. At first remote education in the field study _ institutions alone without activity take they went in the 1980s companion _ television shows developed to go with , this study courses on one how many study institutions in cooperation the work take they went Global computer networks intensity with development a person of activity everyone to the field , that's it including education _ get is also big in the field effect showed _ _ Because of this the same at rest remote education modern information - communications , including the Internet i of possibilities wide used without take to go is based on USA education in history remote study _ national universities , remote education using received new specialties , scientific degrees to the body came _ An example in Colorado _ state state of the university administrative the work host MA , Chicago state university informatics , George Washington University education Management , Pennsylvania state of the university acoustics master's degree and Maryland University core physics bachelor's degree degrees to show can _

Remote education in our republic education to the system new come in coming method be , present _ in the day this to the process serious attention giving is getting married and his basics is being created . All higher study _ in their countries computer classes organize done being their _ a lot part of the Internet global network connection based on activity is showing .

In the institute remote it's winter methodical materials (texts , audio and video textbooks , electronic textbooks) some sciences in teaching is being used and good the result is giving From a distance in education main attention educational - methodical materials to prepare focus it is necessary Study _ methodical of materials quality From a distance teaching of quality the most main from the factors is

one In our country done being increased education in the system reforms in transfer new information from technologies fruitful use important importance occupation is doing Personnel _ preparation national program second stage education institutions material technical and information base strengthening and advanced pedagogical technologies with provide to the issue separately attention given _ That's why for higher education institutions , profession colleges and academic in lyceums new pedagogical of technology from a distance to teach current to do about wide in scope affairs done is being increased .

High study _ from 30 people from their countries more than mature teachers choose taken , they from a distance teaching according to again prepared . in 2000 the world bank initiative with Moscow and in Bishkek study _ centers organize to him _ offer done participants new study methodology from a distance in order manage and electron courses methods according to again prepared . of the project university participants for economic directions _ according to remote teaching in order training transfer for technical base tools organize done _ to the Internet connection ways _ looking for Of these all of them given technology of types prospects about _ to speak possibility gives _

Teachers (pedagogues) . _ new duties . Remote study _ of a teacher (pedagogue) . duties expands and updates . It's tickling courses always improvement , creative activity and qualification increase , included news and to innovation suitable knowledge process coordination necessary _

Our country education in the system significant changes _ happened day by day obvious apparently is going Various education forms row especially from a distance teaching (distance _ teaching) wide usability is also a joy case _

This of style a lot advantage sides presence to many obviously _ All higher study _ in their countries from a distance teaching technique and technology done increase about series affairs take is going Information technologies development from a distance to teach organize to do new the approach requirement is enough From a distance to teach organize to reach present time of models based on communication and network technologies lies _ This technologies from information to users wide comprehensive road _ open to give with together them protection reach the problem cause releases _

From a distance in education teacher with of the listener between straight away of communication there are some that do n't problems cause releases _ For example , problematic study _ process organize in reaching known difficulties appear will be The listener mature expert by doing in preparation problematic to teach organize reach communication teleconference through done increase can _ But, this with the

problem full _ solution reached it won't be . This the problem solution reach for additional _ study materials work exit must will be These are in line different level problematic assignments , problematic situation harvest doer instructions _ and etc to be to the goal according to

Current time on demand complete _ answer giving specialist preparation this is a period is a requirement . Current at the time in our republic young generation education , education , knowledge _ give , modern information to technologies closely approach and new technique and technologies with to work to teach in order to very a lot positive affairs done increased is going Of them the main one , " From a distance study _ technique and technology" . This point of view from the point of view young generation from a distance teaching to the system preparation stages the following in appearance done increase can :

Present information technologies fast developed going period remote teaching big importance occupation is doing Because of education this type that's it until then there is was _ education of types his own some positive sides with separate stands _ From a distance of teaching daytime and another education of types different aspect it is this education type very wide population the masses attraction to do can _ From a distance study _ in itself daytime and external education of types positive features incarnate is enough To these aspects according to from a distance teaching present of the day promising education of types one is considered

From a distance study _ based on education to give for reading at will has been of the population certain part education institution is located to the ground collection a must not _ Second , the listener or student _ by excess spend - cost to do necessity it won't be . Thirdly , this education type attraction of those who do young limitations an exception to do can _ From a distance study _ to attraction to be done the contingent the following social to groups belongs to has been persons organize to do can :

- second higher or additional _ information get , qualification increase and again preparation pass at will those who are
- regional power and management leaders ;
- traditional education system possibilities limited because of information could not get young people ;
- own _ information status modern requirements level raise at will a firm that is and enterprises employees ;
- second parallel information to receive wanted listeners ;
- from the center far , less mastered _ regions population ;
- free moved _ walking limited persons ;
- physical defects was _ persons ;

- military in service was _ persons and others _

Remote study _ control .

This is being studied study materials theoretical appropriation the results from checking consists of The test is really about science very a lot of questions organize found to be need and each _ question for one how many answer options offer will be done . A student they are from among right _ the answer to choose it is necessary Tests himself _ to check good intended and individual training for very comfortable _

Remote study _ participants that is , listeners , students and there are enough teachers _ level ready to be , that is remote teaching learning methods , means and organizational from the forms use they know need _ That's why fundamental informatics for as a natural science remote of teaching indispensable part to be a must

Remote study _ method traditional education from the forms difference does _ He teaches students to himself comfortable time , place and in the circumstances teaching enable gives _ Study _ to the chair depends didn't happen without personal and group demand based on study plans work will be released . Study _ in the process to students scientific information and data according to centralized network through mutually information exchange current reach can _ Study _ areas , technical and from vehicles efficient use of information collect one to the system put without expressing to be given and experts again costs in preparation to reduce reach is expected . Education to give in the process the most modern information , telecommunications and from technologies is used .

Remote education the time of the teacher (pedagogue) and specialists opportunity to save from the level come came out without material interest increase with independent education get for wide conditions by creating gives _ Education in the field being achieved of achievements the world education system within exchange organize reach , this in the field achievements hand _ input provide no doubt .

Remote study _ method expert of teachers (pedagogues) . forward brand new current tasks is putting Because , study _ materials by filling go , creative approach and news with qualification increase and this indicators the world science achievements with coordinate they are required to go . This is teaching method education on demand basically of the student own on work organize reach , more knowledge to get aspiration , computer with independent work and received knowledge creative to use provides and received knowledge special educational and methodological publications , tests with checked and completed can _

Information of technologies wide scale current to be done with remote to teach one series social important owner issues also valid in solving reach can _ Education to the field was _ of citizens needs in satisfaction amenities Create with of our republic

qualified to experts has been the demand is also met . Also citizens _ social and professional activities to increase reach can _ Private entrepreneurship with mashg' ul of individuals society in his life activity strengthen their _ worldview to get rich service does _ This is great _ education in the system assembled _ scientific achievements , expert employees and their in the presence of of our country economic potential as reinforcement priority plans done increase task is putting

Remote education to give method our republic borders pressing pass , CIS and the world scale big education centers with in communication education _ _ to get new modern whole education opportunity to create service does _

Remote study _ geographical in terms of away is located schools and academic education for intended was _ But modern _ information and telecommunications of technologies development education process long from a distance standing up done to increase road _ open gave _ As a result remote study _ style based on teaching fast time inside High and medium special study in their countries in teaching new styles to apply again one impulse it happened Remote study _ according to International of the council analyses that's it shows that today in the day the world from 10 million in scale more than students that's it style based on education are getting in the USA that's it style based on study _ in order to new study centers set up is being done and they are national personnel time requirements based on preparation and again preparation advantages has _
