

## THE ROLE OF INDEPENDENT EDUCATION IN PREPARATION OF INTENTIONAL MANAGEMENT OF STUDENTS IN PRESCHOOL EDUCATION ORGANIZATIONS

Makhmudova Zulfiya Khomidovna  
Namangan State University, Independent Researcher

### ABSTRACT

The article describes the pedagogical conditions for preparing preschool students for management activities by organizing their independent education in higher education institutions.

**Keywords:** independent education; independent work; independent work; professional ontogeny; Instruction; specialty subjects; course work; educational activity.

### INTRODUCTION

There is no doubt that the changes taking place in the higher education system in Uzbekistan will have a positive effect on the development of the state and society. Because higher education takes a leading place in increasing the intellectual potential of any country, training competitive, highly qualified personnel.

In recent years, raising the content of higher education to a new level in terms of quality, establishing a system of training highly qualified personnel that can contribute to the sustainable development of the social sphere and economic sectors, and find a place in the labor market. wide-scale measures have been determined and effective results are being achieved.

In particular, the development of mechanisms for transferring curricula of higher education institutions to the credit-module system and gradually transferring them to this system, increasing the share of independent study hours, students' independent education, critical and creative thinking, systematic analysis, formation of entrepreneurial skills, introduction of methods and technologies aimed at strengthening competencies in the educational process, directing the educational process to the formation of practical skills, in this regard, the educational process is based on international educational standards the wide introduction of advanced pedagogical technologies, educational programs and teaching-methodical materials [1] is underway.

The formation and development of knowledge and skills in education management (preschool education organization management) among students of preschool education of higher educational institutions are considered as the main tasks in the qualification requirements of the bachelor's education. shown.

Solving this task requires a modern approach to the organization of independent education of requirements. In the credit-module system, it is assumed that the educational load in the bachelor's degree will make up 40-50% classroom hours, 50-60% independent working hours.

Independent education of the student in the auditorium and outside the auditorium (taking into account the hours of the study load outside the auditorium) directly under the guidance of the teacher is carried out in the form of independent work or independent study of subjects in the subject (module) by the student. "represents the form of academic work.

We believe that it is necessary to prepare undergraduate students for the management of pre-school educational organizations (MTT), and to use independent educational assignments from specialized subjects in order to form practical competencies in them.

## **LITERATURE ANALYSIS**

The student's pursuit of independent acquisition of knowledge, skills, and vision continues throughout the student's work. This process requires students to independently prepare for educational tasks.

Uzbek scientists, who emphasize the production of future specialists in our country, the organization of independent education of students, are an important factor in improving production, and are paying attention to the popularization of experiences in this regard.

Authors A. Abdurashidov and O'Yoldoshev analyzed the views of many researchers, one of the unique educational activities in independent education of higher students (NDNikandrov); various types of individual and group learning activities of students organized in the auditorium and outside the auditorium (RANizomov); independent learning - a unique pedagogical factor of organizing and managing students' learning and knowledge activities in the scientific process of education (PIPidkasisky); A characteristic feature of independent work is the movement of the internal desire, which you can understand the purpose of the activity. Independent work - formation of independent mind in practice (NIKuzmina) evaluation, explaining the lack of research into the scientific and methodological foundations of the organization of independent education in the didactics of higher education today, determining the levels of necessary, basic educational knowledge, skills, and competences. they emphasize that there is no system, each student is unique, their processes of adaptation to higher education are not studied [5.77].

According to the researchers, human activity as a subject and development is characterized by a long and complex process. Professional ontogeny begins long before a person chooses a profession and engages in his work, and his mastering of his professional fields as a specialist goes through several stages [6.61].

In our opinion, the training of future specialists in higher education institutions for professional activities and managerial activities in independent educational facilities is considered one of such stages.

Theoretical study of specialized subjects in itself helps students to manage preschool educational organization skills and more. It is necessary to create pedagogic conditions in order to apply the given information about management activity, its content, management actions and methods to production. According to scientists, a person has a new life due to the increasing role of science in society in the current conditions of constant enrichment of knowledge. It no longer represents a practical complement to existing knowledge and vision. The process of enriching people with scientific knowledge and practical training is playing a decisive role. This cannot be done by an educational system that continuously develops and differentiates in the process. Personnel training plays an important role in it.

The increasing importance of knowledge and information in social benefits, the gradual impact of knowledge on human capital has dramatically changed its role in modern social life. This educational situation is traditionally not limited to the field of science, but integration with practice is important [7.22.]. It can be deduced that the integration of students' independent study and independent work with practice in the higher education system can be one of the ways to improve the quality of their professional training.

## RESEARCH METHODOLOGY

Social-economic, spiritual-educational changes taking place in our country, developing market economy relations, development of science, science, technology, technologies, rapid development and globalization of information in the process of managing the goals of preschool education - pedagogical preparation. can come

In the Decree of the President of the Republic of Uzbekistan Sh.M. Mirziyoev "Measures for fundamental provision of the management of the preschool education system" the material in the field was shown. In particular, it was emphasized that "retraining and professional development of the leaders and pedagogical personnel of MTMs, who are able to solve the issues of raising and all-round development of children at a professional level by learning modern pedagogical technologies and methods" [2].

the Law of the Republic of Uzbekistan "On Preschool Education and Training" : " The director is the head of the state preschool education organization. The director is responsible for the current management of the activities of the state preschool education organization. The normative legal documents of the management and management bodies of the state preschool education organization, the charter of the organization of state preschool education institutions, the right to work with the right to provide " [3].

In the "Preschool Education 2030 Education Concept of the Republic of Uzbekistan" the current state of preschool education and existing problems in its development were analyzed, and it refers to "the shortage of management personnel in the preschool education system and their low qualifications" [4]. emphasized.

For this, it is necessary to theoretically and methodically provide the issue of independent education in preparing students for the purposeful management of their organizations . To do this, in the teaching of general professional and specialized subjects, to support independent production of students and to improve their skills, to produce training methods based on the production of modular products, to produce materials and technical base measures that allow students to work independently. will help. Electronic programs, textbooks and manuals are needed for effective production of information technology.

## ANALYSIS AND RESULTS

Independent education of students in the direction of preschool education in the experimental work carried out in the research work "Instructions for the organization and control of independent education of students in the credit-module system in higher education institutions" was organized on the basis of the subjects of independent study in the curriculum of "Preschool Pedagogy", "Management and Management in Preschool Education", "Preschool Education Management" taught in the field of preschool education the purpose of studying student management activities is reflected in the content of the assignment form.

A student's independent work is a systematic activity aimed at improving knowledge, skills and competence in the curriculum of a particular subject, based on the advice and recommendations of a student's subject teacher.

By organizing the independent education of students, it was envisaged to provide honest service to the purposeful management of their MTTs.

In the production of student management activities in the field of preschool education, attention was paid to independent educational tasks performed simultaneously outside the classroom. In particular, to see the coursework of students in the subject "Management and Management in Preschool Education" in the curriculum. In the curriculum, the subjects of the course work aimed at studying the leadership of preschool educational organizations are recommended, and the topics include the director of preschool educational organizations and his role in the organization of pedagogical processes, theoretical foundations of MTT management, modern management methods, organization of a pedagogical and supervisory board in a preschool educational organization, organization of a pedagogical and supervisory board in a preschool educational organization, organization and management of modern preschool educational organizations, MTT parent- management of work with mothers, requirements for the organization of healthy feeding in MTT, formalization of management documents and management procedure in MTT, director's supervision of pedagogical processes and management devices.

The production of course work gives students a close acquaintance with the development of topics and the situation in practice, with the activities of the MTT director.

, the assignments to study the production process in the MTT management system and the director's managerial skills in the subjects of independent education were fully completed by the students.

## **CONCLUSIONS**

In conclusion, management of the organization and preschool education is a multifaceted complex process, the main factor of its production is the effective production of pedagogical conditions and mechanisms of production of students for this activity at the undergraduate stage of higher education. results, students' independent mastering of educational material, assignments of different complexity, practical programs in the audience and creation of independent educational tasks in accordance with the increase of theoretical knowledge, practical skills and qualifications on a creative and independent basis outside the audience. is important.
