The future in our republic in teacher training their professional competence development , professional competence formation , teaching methodology improvement , students in the presence of pedagogical software products work exit normative basics and material technique base was created .

Keywords : Continuous _ _ education system , independent education , Education platforms , E-learning

Our republic is young in teacher training their professional competence development , professional competence formation, teaching methodology improvement, students Pedagogical instructional participation products work exit normative basics and Material and technical base was created .

Uzbekistan Republic more development according to Actions in the strategy " Continuous education system more improvement , quality education services opportunities increase , labor of the market modern needs according to high qualified personnel preparation policy continue It is important to continue priority task as defined . This about modern teacher specific adjectives and professional levels of competence evaluation methodology work exit their mathematical competences to develop conditions expandable. Independent education - knowledge appropriation imaginations development concepts, skills and qualifications fruit to do according to study of the process subjective to the goal consistent , regular , independent and autonomous activity organize reach means _ Study process efficient teaching quality of the student independent to know activity with is determined . This each both concept to each other depend _ But independent to work, one row reasons because of education leader and activator shape as to look necessary knowledge, skills , skills , habits, beliefs, spirituality etc from the teacher to the student directly _ _ past won't stay Why only material items from hand to hand passes . Har one student them hearing, oral information understanding , reading , texts analysis to do and understanding and critical analysis to do like independence work through absorbs. Independent in the educational system basic didactic requirements as the following before pushed :

1. Independent education system of students deep and perfect knowledge get , their knowledge get abilities development, independent knowledge get it _ expansion , deepening , in practice apply skill harvest like doing the main didactic task solution reach need _
2. System of didactics the most first of all intelligibility and systematicity , theory with of practice connection , conscious and creative activity , high scientific level education to give like main principles satisfy necessary _
3. In students different skill and skills harvest to do for to the system incoming of work study purpose and content should be different . 4 . In the auditorium done previous independent education of execution integrity the next ones in execution the ground to create it is necessary This way with some affairs between not only " close " but also " far " connection too is provided . This task successful solution reach not only maybe the teacher's pedagogical skills are different of work affairs in the system importance and place how understanding of students knowing , thinking ability and another qualities

such as development depends. However only one system of students knowledge , skill and qualifications in formation teacher of work success does not define Of this for again main principles to know it is necessary To them action by doing independent of work , to them action to do methodology the effect provide can _ If independent work study of the process main from the elements one being if left and his for each one in class special time separable if it is constant and planned respectively if transferred , ring-ring if not , his efficiency is achieved .

Students independent work types classification . Teacher's assignment and his control under , however his without the participation of this for special separated time during students by executable work independent work is called Students in this conscious respectively to the goal to reach seeks , his mental opportunities to work put in , own actions he or the result this in the form (oral answer , geographic structure , experience description , calculations and others) represent .

Independent work teacher determined tasks efficient perform methods search , job the results analysis to do with depends active mental actions demand does. Study in the process applicable all kind of Independent students study of activity character , didactic purpose , content , independence level and students creative elements like different signs according to classified.Today in the day higher education in the system education system information , it the world information to the network connected computer information network with complete provide processes is going Study to the process information communication and internet technologies wide current to do according to practical affairs take is going This in the direction the following main tasks as set put :- education to the process modern information communication and innovative education technologies , electronic textbooks , multimedia tools wide current reach through teaching quality fundamentally improvement ; - education institutions educational laboratory base modern kind of study and laboratory equipment , computer equipment with equipment ;

- education process organize e- learning in education resources create and of them efficient use. Digital technologies education to the process wide current to do as a result to the following too reach can:Electronic in the form of study literature and lecture of the texts content constant respectively updated and get rich to go opportunity is born.Study room students to the internet room turning around goes. Open education platforms to the road to put the ground created in it students in our republic the most high qualified from pedagogues education to get they achieve E- learning literature design and work exit very a lot work demand process is , but work once _ from the outset after of them education in the process infinite use can _

This while own in turn big economic effect gives. Education educational platforms _ information not only conveys , but them animated way in the student imagination harvest to do for service does _ To be mentioned below of circumstances education platforms design scenario work on the way out in consideration taken student education program and educational -methodical works publication being done to the requirements answer give get _ Education platforms certain field direction according to presented for the first time given bro first publication electronic version of the methodological manual as preparation and content common bro special to the course relevance ; known study course (or his one part) of content open to give and educational and methodological purposes to reach possibility give will receive level to volume ownership ; educational and methodological purposes to reach help giver demonstrative to the elements ownership ; in the text of hyperinstructions existence is necessary WEB resources in cases and another information of resources that it is shown ; of the student the

material appropriation level independent be evaluated provider control of questions availability ; many in languages work and opportunity limited students for special of conditions created . Independent electronic in education education resources appropriate use lesson content enriches _ Teacher simple in class teacher book and textbook with just doing it remains only ICT- based in classes teacher one how many to sources appeal does _ Including electronic method manual and e- learning manual his for helper and leading material if so , electronic assignments and tests , multimedia products of students independent their performance for main material is considered .
